Bucket overview

AWS Region	Amazon Resource Name (ARN)	Creation date
US West (Oregon) us-west-2	📋 arn:aws:s3:::aws-madhu	January 29, 2024, 20:22:17 (UTC+05:30)

Bucket Versioning   [Edit]

Versioning is a means of keeping multiple variants of an object in the same bucket. You can use versioning to preserve, retrieve, and restore every version of every object stored in your Amazon S3 bucket. With versioning, you can easily recover from both unintended user actions and application failures. Learn more 🔗

Bucket Versioning
Disabled
Multi-factor authentication (MFA) delete
An additional layer of security that requires multi-factor authentication for changing Bucket Versioning settings and permanently deleting object versions. To modify MFA delete settings, use the AWS CLI, AWS SDK, or the Amazon S3 REST API. Learn more 🔗
Disabled

▶ AWS Marketplace for S3

Store objects using a write-once-read-many (WORM) model to help you prevent objects from being deleted or overwritten for a fixed amount of time or indefinitely. Object Lock works only in versioned buckets. Learn more 🔗

Object Lock
Disabled

Requester pays   [Edit]

When enabled, the requester pays for requests and data transfer costs, and anonymous access to this bucket is disabled. Learn more 🔗

Requester pays
Disabled

Static website hosting   [Edit]

Use this bucket to host a website or redirect requests. Learn more 🔗

Static website hosting
Enabled
Hosting type

Bucket hosting
Bucket website endpoint
When you configure your bucket as a static website, the website is available at the AWS Region-specific website endpoint of the bucket. Learn more 🔗

Permissions overview

Access
Bucket and objects not public

Block public access (bucket settings)   [Edit]

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. Learn more ⧉

Block _all_ public access
⚠ Off
▶ Individual Block Public Access settings for this bucket

Bucket policy   [Edit]   [Delete]

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. Learn more ⧉

No policy to display.   [⧉ Copy]
